OCLC HELPS RETURN STOLEN BOOKS

Five employees from the OCLC Retrospective Conversion Division have installed themselves and eight terminals in a warehouse in Omaha, Nebraska to inventory 16,000 rare books, letters, and manuscripts. The stolen documents were discovered recently at a house in Ottumwa, Iowa, belonging to an eccentric antique and rare-books dealer.

Using OCLC Online Union Catalog of bibliographic records and Auto-Graphics software, the staff will create an inventory with holdings and location information. The FBI will then use the list to locate libraries from which the materials may have been stolen.

OCLC is donating its services and seeks volunteers familiar with cataloging procedures for the estimated four-week project. To volunteer call Claudia Bogner at 800-848-5878.

40 SCHOOL LIBRARIES, ONE AUTOMATION SYSTEM

Forty school libraries in Pasco County, Florida, are installing a single CLSI UNIX-based system to automate acquisitions, cataloging, and circulation. An online catalog will provide complete information about each library's holdings. Three schools currently under construction will use CD-CAT, CLSI's public-access catalog on CD-ROM, until online access can be established. Over 260 terminals are planned for the schools, which serve over 35,000 students.
